

## Chemistry Lab

*The Chemistry Lab at our college, established in 2017, is a well-resourced and fully equipped facility. It provides students with a valuable platform to apply theoretical knowledge to real-life scenarios and conduct hands-on*

*experiments. The laboratory offers a wide range of experiments that encompass both inorganic and organic chemistry, as well as analytical techniques. These experiments include qualitative inorganic analysis, volumetric analysis, gravimetric analysis, preparation of inorganic complexes, qualitative organic analysis, preparation and isolation of organic compounds, chromatography, and conductometric titrations. The Chemistry Lab serves as an essential component of the chemistry department, allowing students to gain practical experience and enhance their understanding of chemical principles and applications.*
