

Computer Science Lab

The Computer Science Lab at our college places a significant emphasis on the importance of computer technology and its impact on daily life. Our dedicated faculty, experts in programming languages like C, C++, and Java, provide students with a strong foundation in these languages. In addition to programming, students receive training in web technologies and web design. The curriculum covers a range of topics, including computer basics, algorithms, flowcharts, fundamental coding skills, object-oriented programming, templates, exception handling, GUI programming using AWT and Swing, and more. Data Structures through C++ equips students to understand data organization, time and space complexity, and Database Management System (DBMS) hones their skills in data storage and management.
